ABOUT ME

Full Stack Developer with 3+ years of experience building and maintaining web applications from front-end UI through back-end APIs and database design. Experienced leading small development teams, mentoring developers, and establishing standards that measurably improve delivery speed. Skilled in JavaScript, TypeScript, React, Angular, Node.js (Express/NestJS), Python, SQL, and NoSQL databases. Known for integrating third-party APIs, translating complex technical work into business value, and collaborating across development, design, and stakeholder teams to deliver reliable, scalable software.

PROFESSIONAL EXPERIENCE

Lead Software Developer

09/2023 – 03/2026

MobileDash LLC., Remote from Rexburg ID

- Led a team of 2–3 developers building two parallel applications (a legacy system and a new Oracle Apex platform serving 40–50 end users), owning full stack delivery across front-end UI, REST API development, and database architecture, while mentoring developers, unblocking blockers, and delegating tasks to keep the team moving.
- Integrated the Intuit API end-to-end to replace manual cash and check collection with in-app invoicing and digital payment processing, reducing billing errors, accelerating revenue collection, and giving the business real-time visibility into invoice balances; implemented OAuth 2.0 token acquisition and automated renewal to maintain secure, uninterrupted sessions.
- Redesigned the SQL database architecture for the Oracle Apex application from the ground up, resolving structural issues that caused slow queries, poor scalability, and data integrity bugs; the improved schema supported multi-entity construction work order and project data and delivered a measurable boost to overall application performance.
- Built a lead intake form from scratch in the Oracle Apex platform that used dynamic dropdowns driven by admin-managed settings to route leads to the correct service or product, then automatically generated the associated purchase and work orders, eliminating a fully manual process from the legacy system and empowering company admins to update service configurations directly without routing changes through a third party.
- Established and enforced developer standards and coding conventions across the team, reducing feature delivery time from 2–3 months down to 1–2 weeks and building a consistent, maintainable codebase that lowered the onboarding curve for new developers.
- Built and maintained RESTful APIs using Node.js with Express and NestJS, and maintained MongoDB schemas and query performance on the legacy production application, keeping thousands of document retrievals reliable across diverse query types with minimal downtime during active parallel development.
- Maintained and extended Angular components across the legacy application to ensure UI stability during parallel development, and integrated external APIs to capture IP address and consent metadata for terms and conditions compliance, creating accurate audit trails for legal and regulatory purposes.
- Served as the primary technical liaison between development, design, and business stakeholders, translating feature requirements into technical plans, communicating trade-offs in non-technical terms, and helping leadership make informed product decisions without needing to interpret technical detail.
- Reviewed and merged GitHub pull requests, enforced code quality standards, and participated in daily Agile/Scrum standups to surface blockers and keep cross-functional teams aligned across design, engineering, and product.

Developer Intern

01/2023 – 04/2023

The Church of Jesus Christ of Latter-day Saints, Remote from Riverton UT

- Contributed UI fixes and small feature improvements to a member-facing portal querying millions of documents, delivering changes that shipped to users across the full development cycle from coding to QA to production deployment.
- Diagnosed and resolved front-end UI bugs in Angular components using TypeScript, Node.js, SASS, and Maven, working alongside developers to identify root causes and implement fixes that restored correct display and behavior for members using the portal.
- Created and updated Jira bug, story, and feature tickets, performing requirement elicitation directly with stakeholders to define clear scope for other developers and ensure work was well-defined before implementation began.
- Independently executed manual QA across bug fixes, PR reviews, and production deployments, applying workflow knowledge to run through test cases without needing them defined; reviewed and approved GitHub pull requests as part of the same quality gate process.
- Upgraded Node.js dependencies including Bootstrap and Angular, resolving breaking changes in the codebase introduced by the version bumps; independently deployed application changes to staging and production via Azure DevOps CI/CD pipelines, taking full ownership of the release process while the engineering manager was unavailable.

CAD Drafter

02/2021 – 10/2022

HLE Inc., Blackfoot ID

- Drafted plans for surveyors and civil engineers using Civil3D, collaborating with state and local jurisdictions to meet regulatory requirements.

Construction Estimator

03/2020 – 02/2021

Mickelsen Construction Inc., Blackfoot ID

- Created civil estimates and Excel-based calculation tools to support vendor negotiations and project bidding.

TECHNICAL SKILLS

Frontend	JavaScript, TypeScript, React, Angular, Bootstrap, HTML, CSS/SASS/SCSS/Tailwind
Backend	OAuth 2.0 & Security, Node.js (Express, NestJS), PL/SQL, Python, Java
Databases	SQL (Oracle Apex, MySQL, PostgreSQL, SQLite, MS SQL Server), MongoDB (NoSQL)
API / Integrations	Intuit API (payments/invoicing), IP geolocation APIs, RESTful API Design, third-party REST integrations, GraphQL, Swagger API
DevOps & Tools	Git / GitHub, Azure DevOps (CI/CD), Docker, Render, Bash Scripting, Code Review, Jira, Agile / Scrum, SaaS
Testing	Playwright (E2E), utPLSQL (Unit), Jest (Unit)
Other Languages	C++, Kotlin, Swift, Rust, VBA
Soft Skills	Cross-functional Collaboration, Leadership, Conflict Resolution, Adaptability, Self-Motivated, Attention to Detail, Continuous Learner, Problem-Solving, Bilingual (Spanish)

EDUCATION

Bachelor of Science in Software Engineering

Emphasis in Web Development and Software Design

Brigham Young University – Idaho | Graduated July 2023
