ABOUT ME

Full Stack Developer with 3+ years of experience building and maintaining web applications from front-end UI through back-end APIs and database design. Experienced leading small development teams, mentoring developers, and establishing standards that measurably improve delivery speed. Skilled in JavaScript, TypeScript, React, Angular, Node.js (Express/NestJS), Python, SQL, and NoSQL databases. Known for integrating third-party APIs, translating complex technical work into business value, and collaborating across development, design, and stakeholder teams to deliver reliable, scalable software.

PROFESSIONAL EXPERIENCE

Lead Software Developer

09/2023 – 03/2026

MobileDash LLC., Remote from Rexburg ID

- **Team Lead & Mentorship:** Owned sprint planning, task delegation, code reviews, and daily Agile standups; unblocked developers to maintain delivery momentum.
- **Intuit API Integration:** Built end-to-end invoicing and digital payment flow (OAuth 2.0 with auto-renewal), replacing manual cash/check collection and giving leadership real-time billing visibility.
- **Database Redesign:** Rebuilt Oracle Apex SQL schema from scratch, resolving slow queries, scalability issues, and data-integrity bugs across multi-entity construction work orders.
- **Lead Intake Automation:** Built a dynamic lead form that auto-routes submissions and generates purchase and work orders, eliminating a fully manual legacy process and enabling admins to update configs without developer involvement.
- **Delivery Speed:** Established team coding standards and conventions, cutting feature delivery from 2–3 months down to 1–2 weeks and reducing new-developer onboarding time.
- **Backend & APIs:** Built and maintained RESTful APIs (Node.js/Express, NestJS) and managed MongoDB schemas on the legacy production app with minimal downtime during parallel development.
- **Compliance Integration:** Integrated IP-geolocation APIs to capture consent metadata for terms-and-conditions audit trails; maintained Angular UI components throughout parallel development.
- **Stakeholder Communication:** Served as primary liaison between engineering, design, and business stakeholders — translating technical trade-offs into plain language to support informed product decisions.

Developer Intern

01/2023 – 04/2023

The Church of Jesus Christ of Latter-day Saints, Remote from Riverton UT

- **Full-cycle delivery:** Shipped UI fixes and feature improvements to a member-facing portal querying millions of documents, taking changes from coding through QA to production deployment.
- **Bug resolution:** Diagnosed and fixed front-end Angular bugs using TypeScript, Node.js, SASS, and Maven, restoring correct portal behavior for end users.
- **Requirements & tickets:** Wrote and refined Jira stories, bugs, and feature tickets via direct stakeholder elicitation — ensuring work was clearly scoped before implementation.
- **QA & CI/CD:** Independently executed manual QA and reviewed GitHub PRs; deployed to staging and production via Azure DevOps pipelines.

CAD Drafter

02/2021 – 10/2022

HLE Inc., Blackfoot ID

- **Survey & civil drafting:** Produced Civil3D plan sets for surveyors and civil engineers across multiple active projects simultaneously.

- **Regulatory compliance:** Coordinated directly with state and local municipalities to ensure drawings met all applicable regulatory requirements before submission.
- **Cross-discipline collaboration:** Worked closely with engineers and field crews, translating field notes and design intent into accurate, construction-ready documents.

Construction Estimator

03/2020 – 02/2021

Mickelsen Construction Inc., Blackfoot ID

- **Civil estimates:** Developed detailed cost estimates for civil construction projects, used directly in vendor negotiations and competitive bid submissions.
- **Excel tools:** Built custom Excel-based calculation tools that standardized estimating workflows and improved bid accuracy across the team.
- **Vendor coordination:** Engaged vendors and subcontractors to obtain competitive pricing, ensuring estimates reflected current market rates.

TECHNICAL SKILLS

Frontend	JavaScript, TypeScript, React, Vite, Angular, Bootstrap, HTML, CSS, SASS/SCSS, Tailwind, Responsive design
Backend	OAuth 2.0 & Security, Node.js, Express, NestJS, PL/SQL, Python, Java
Databases	SQL, Oracle Apex, MySQL, PostgreSQL, SQLite, Microsoft SQL Server, MongoDB (NoSQL)
API / Integrations	Gemini Flash API, Intuit API (payments/invoicing), IP geolocation APIs, RESTful API Design, Fetch API, JSON, third-party REST integrations, GraphQL, Swagger API
DevOps & Tools	Git, GitHub, GitHub Actions (CI/CD), Azure DevOps (CI/CD), Docker, Render, Bash Scripting, Code Review, Jira, Agile / Scrum, SaaS
IDEs	WebStorm, VSCode, IntelliJ
AI Tools	Claude, Gemini, ChatGPT
Testing	Playwright (E2E), utPLSQL (Unit), Vitest (Unit), Jest (Unit)
Other Languages	C++, Kotlin, Swift, Rust, VBA
Soft Skills	Cross-functional Collaboration, Leadership, Conflict Resolution, Adaptability, Self-Motivated, Attention to Detail, Continuous Learner, Problem-Solving, Bilingual (Spanish)

EDUCATION

Bachelor of Science in Software Engineering

Emphasis in Web Development and Software Design

Brigham Young University – Idaho | Graduated July 2023
